MARKET COMMENTARY

DCE iron ore futures market falling trends by 0.07%.the main contract closed 684.5. the quotation in the morning was increased by 10-20 yuan/mt over yesterday. Some traders refused to sell goods easily. Steel mills wait-and-see sentiment. total transactions remained insipid. SSF at Shandong port dealt 520-540 yuan/mt, decreased 0-10 yuan/mt over yesterday. PBF at Tangshan port dealt 880 yuan/mt, increased 30 yuan/mt over yesterday; According to data tracked by SMM, 74 ships arrived at domestic main ports in February 14-20. Arrivals of cargoes are estimated to stand at 11.23 million mt, down 1.24 million mt from the previous session and down 1.06 million mt year on year. Shipments that departed Australian ports were estimated to rise 2.16 million mt week on week to 16.53 million mt, up 5.01 million mt on the year. And that from Brazilian ports dropped 0.7 million mt to 4.06 million mt on a weekly basis, down 1.92 million mt on the year. The total arrivals of imported ore dropped slightly from the prior session, while the combined shipments from Australia and Brazil rose palpably. Currently speaking, the combined shipments from Australia and Brazil were low throughout the year amid port maintenance and hurricane in Australia and rainstorm in Brazil. In China, on the other hand, the port inventory was high, hence the slightly falling arrivals will not result in tight supplies. Furthermore, quite a number of blast furnaces in Tangshan city resumed the production after the Beijing Winter Olympics, and the demand for iron ore rose as well. Nonetheless, considering the on-going political intervention, iron ore prices will move rangebound in the near term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
