MARKET COMMENTARY

DCE iron ore futures tight , the main contract closed 703, an increase of 0.43% throughout the day. The spot quotation in the morning almost kept steady. some traders were active to sell, Some steel procurement more cautious. total transactions remained insipid. PBF at Shandong port dealt 860-865 yuan/mt; decreased 10 yuan/mt over yesterday. SSF at Shandong port dealt 530-540 yuan/mt, decreased 5 yuan/mt over yesterday. PBF at Tangshan port dealt 870 yuan/mt, decreased 20 yuan/mt over yesterday; This week, SMM's blast furnace operating rate stood at 78.8%,up 1.9 percentage points week on week and down 1.3 percentage points month on month. Mainly due to the Beijing Winter Olympic Games, 10 blast furnaces in Tangshan have resumed production, but considering the winter Paralympic Games will be held next week, the northern region is still facing environmental protection production control, iron ore demand is still stable in the short term. In the short term, the mine price is still weak shock.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
