MARKET COMMENTARY

DCE iron ore futures continued to fluctuate by 0.88% in a day, the main contract closed 922, The spot quotation in the morning almost kept steady. some traders were active to sell, Some steel mills tended to be wait-and-see, and purchasing enthusiasm is not high. Total transactions remained insipid. PBF at Shandong port dealt 1005-1010 yuan/mt; the same as last Friday. SSF at Shandong port dealt 750-755 yuan/mt; increased 5 yuan/mt from last Friday. SSF at Tangshan port dealt 755 yuan/mt. the same as last Friday. Due to the impact of COVID-19, four cities in Tangshan have issued epidemic control since midnight today. The demand for iron ore by certain inhibition, but the impact is limited, at present Tangshan steel mills have to deal with a passport, Iron ore supply is normal. But in view of coke prices today again, once steel profits will appear losses, save the risk of production reduction. In the short term iron ore prices are expected to fluctuate.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
