MARKET COMMENTARY

DCE iron ore futures market falling sharply trends by 5.27%, the main contract closed 791, the quotation in the morning was decreased by 10-15 yuan/mt over yesterday. Market wait-and-see sentiment increased. some traders quotation is still stronger, Some steel mills tended to be wait-and-see, and purchasing enthusiasm is not high. total transactions remained insipid. PBF at Shandong port dealt 910-925 yuan/mt; decreased 15-30 yuan/mt over yesterday. SSF at Shandong port dealt 700-715 yuan/mt; decreased 15-30 yuan/mt over yesterday. PBF at Tangshan port dealt 900 yuan/mt; decreased 30 yuan/mt over yesterday. SSF at Tangshan port dealt 900 yuan/mt; decreased 30 yuan/mt over yesterday. According to SMM, due to the recent epidemic and downstream demand is not good, resulting in a reduction in production of individual steel mills, iron ore demand has decreased. But overall, the current coke drop three rounds, steel profits have improved, most of the steel mills to maintain normal production, hot iron production is still relatively stable in the short term. Superimposed iron ore arrivals have not reached the peak, in the short term, there is still a certain support for the mine price, the price is expected to run in a range of shocks.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
