MARKET COMMENTARY

DCE iron ore fluctuated in a wide range. The main contract closed 914.5,decreased of 1.72%. Traders are generally enthusiastic about selling, steel mills are mainly keep take and see attitude, and the market transaction atmosphere is positive. PBF at Shandong port dealt 975-980yuan/mt,decreased 15-20yuan/mt compare with yesterday.PBF at Tangshan port dealt 980-985yuan/mt, decreased 5-10 yuan/mt than yesterday. As of June 10, the inventory of 35 ports tracked by SMM totaled 123.71 million tons, a continuous decrease of 3.8 million tons compared with the previous week, an increase of 3.46 million tons over the same period of last year, and the port inventory has fallen in the 11th period. According to SMM data, overseas mainstream iron ore shipments are expected to rebound next week. In addition, there is no significant increase in demand in the recent policy boost. The off-season of the steel market is approaching, the steel mills' profits are poor, the operating rate is average, and the steel mills' demand for iron ore is expected to increase significantly, which is expected to reduce the enthusiasm for port dredging. On the whole, it is expected that the iron ore price will fluctuate at a high level next week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
