MARKET COMMENTARY

DCE iron ore was was shocked and continued downward all the day.The main contract closed at 742.5,increased of 1.37 %. Traders are generally motivated to ship, steel mills are mainly on the sidelines, and there are few transactions in the market.PBF at Shandong port dealt 795 -805yuan/mt,increase 10 yuan/mt compare with yesterday;SSF at Shandong port dealt 688 yuan/mt .PBF at Tangshan port dealt 805-815 yuan/mt,increase 10 yuan/mt; SSF at Tangshan port dealt 690-695 yuan/mt. According to SMM statistics, from June 27 to July 3, a total of 77 ships arrived at major ports in my country, with an estimated cargo volume of 10.84 million tons, an increase of 70,000 tons over the previous period and an increase of 1.9 million tons over the same period last year. . During the period, the shipment volume in Australia did not meet expectations, and the increase was relatively limited. The supply side gave some support to the ore price, and the ore price rebounded slightly. Recently, some steel companies have reduced production to stabilize steel prices, and the number of overhauled steel mills is still increasing. The demand for iron ore continues to be weak, and ports may continue to accumulate warehouses. The follow-up blast furnace production

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
