MARKET COMMENTARY

DCE iron ore was was shocked sharply all the day.The main contract closed at 744.5,increased of 2.41%. Traders are actively motivated to ship, Speculative demand increases. Steel mills are mainly on the sidelines, and market turnover continues to pick up.PBF at Shandong port dealt 730 -745 yuan/mt;decrease 15 yuan/mt than yesterday. PBF at Tangshan port dealt 735 yuan/mt Recently, affected by external factors, iron ore futures rose rapidly, and the spot price of iron ore rose passively. On the demand side, according to SMM statistics, since July 15, a total of 12 blast furnaces have successfully resumed production, with a resumption increment of 58000 tons / day. However, due to the rise in ore prices, the meager profits of the original steel mills have narrowed or suffered losses, suppressing the demand for raw materials. Under the influence of various factors, it is expected that the ore price will continue to fluctuate.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
