MARKET COMMENTARY

DCE iron ore futures declined by 2.12% today, the main contract closed 714.5.General transactions in the market.PBF at Shandong port dealt 738-755 yuan/mt, decrease 10-17 yuan/mt;PBF at Tangshan port dealt 748-755 yuan/mt ;decrease 10-20 yuan/mt. On the macro level, based on the current domestic and international economic environment, the market has certain expectations for important national conferences. In terms of supply, Australia and Brazil are about to enter the rainy season, which may lead to a reduction in shipment. After the festival, the replenishment of steel mills was gradually ended, and the epidemic situation in some areas affected the downstream construction and raw material transportation. The market lacked confidence in the growth of iron ore demand. The price range of iron ore will fluctuate in the short term.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
