MARKET COMMENTARY

DCE iron ore futures declined by 0.8 % today, the main contract closed 802.5. The traders' willingness to ship is general.The steel mills are less active to purchase.The overall trading sentiment of the market is worse. PBF at Shandong port dealt 815 yuan/mt,decrease 5yuan/mt; SSF at Shandong port dealt 677 yuan/mt .PBF at Tangshan port dealt 826-827 yuan/mt,decrease 1-9 yuan/mt. On the supply side, according to SMM statistics, the global iron ore shipments last week totaled 30.48 million tons, down 3.3% month on month. Among them, 15.75 million tons were shipped from Australia to China, an increase of 2.8% month on month; Brazil sent 2.05 million tons to China, a year-on-year decrease of 46.9%. The total amount of iron ore in China reached 27.31 million tons, an increase of 33.6% month on month. The decrease in arrivals in the previous period was mainly due to the impact of the epidemic on the efficiency of port operations, while the arrivals in the current period have recovered. On the current demand side, the iron ore inventory of the steel mill has increased slightly, and the winter storage plan is still slowly carried out. From the macro news, the market had some optimistic expectations for the economic meeting and the Fed's interest rate

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
