MARKET COMMENTARY

Today, iron ore futures fluctuated upward, with the most-traded I2505 contract closing at 828.5 yuan/mt, up 0.91% for the day. Traders showed strong enthusiasm for selling. Steel mills adopted a more cautious sentiment, purchasing as needed. In Shandong, mainstream transaction prices for PB fines were 811-815 yuan/mt, up 10-15 yuan/mt from yesterday; in Tangshan, PB fines transaction prices were around 830-835 yuan/mt, also up 10-15 yuan/mt from yesterday. In the morning, a cyclone in Australia caused heavy rainfall, significantly impacting iron ore shipping ports, with Australia's shipments expected to be halved this week. This raised concerns in the market about future supply, driving iron ore prices higher. In the afternoon, news related to the real estate sector spurred a stock market rally, further boosting black commodities. However, SMM's pig iron data showed a WoW decline in daily average output by 13,800 mt. Overall, iron ore demand is expected to weaken, coupled with the current overvaluation of iron ore, increasing short-term resistance to price growth, which may lead to a continuation of the fluctuating trend.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
