MARKET COMMENTARY

Today, iron ore futures turned from strong to weak, with a significant decline in the afternoon. The most-traded I2505 contract finally closed at 810.5 yuan/mt, down 0.98% for the day. Traders sold goods based on market trends, while steel mills restocked as needed. Market transactions were moderate. In Shandong, mainstream transaction prices for PB fines were at 800-805 yuan/mt, up 0-3 yuan/mt from yesterday; in Tangshan, transaction prices for PB fines were around 820-825 yuan/mt, relatively stable compared to yesterday. Over the weekend, the impact of the cyclone in Australia temporarily ended, and iron ore shipments are expected to return to normal next week. Short-term supply support for iron ore has weakened, and a loose supply pattern is expected to continue in the future. Considering the current high valuation, the short-term upward momentum is expected to remain weak, and the market may continue to fluctuate rangebound next week.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
