## MARKET COMMENTARY

Today, DCE iron ore futures continued to decline. The most-traded I2505 contract closed at 813 yuan/mt, down 2.17% for the day. Traders sold goods based on market trends, steel mills purchased as needed, and speculative trading by traders increased. The market transaction atmosphere was moderate. In Shandong, mainstream transaction prices for PB fines were 808-816 yuan/mt, down 10-15 yuan/mt from yesterday; in Tangshan, transaction prices for PB fines were around 820-825 yuan/mt, also down 10-15 yuan/mt from yesterday. According to SMM's weekly maintenance statistics, this week's blast furnace maintenance impacted pig iron production by 167.42, up 51,500 mt WoW. It is expected to increase by another 43,000 mt next week. Pig iron production slightly declined, and iron ore demand weakened. Additionally, Vietnam and South Korea's steel policies targeting China have been implemented, intensifying market pessimism and dragging down ore prices. Currently, steel mills are in good profit conditions, and inventory pressure remains low. Meanwhile, with the Two Sessions approaching, the market still holds high expectations for policy direction and industry development. Overall, in the short term, the downside adjustment space

### Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

**Data Exclusions***

| | 62% | 58% | 65% |
|---|---|---|---|
| Port Index | 0 | 0 | 0 |
| Seaborne index | 0 | | 0 |
| Lump Index 62.5 | 0 | | |

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
