MARKET COMMENTARY

Today, DCE Iron ore futures fluctuated upward throughout the day. The most-traded contract I2505 finally closed at 789, with a daily increase of 1.2%. Traders actively sold goods, steel mills purchased as needed, and the market transaction atmosphere was moderate. In Shandong, the mainstream transaction prices of PB fines were 785-788 yuan/mt, up 5-10 yuan/mt from yesterday. In Tangshan, the transaction prices of PB fines were around 795-800 yuan/mt, up 10-15 yuan/mt from yesterday. This week, the data of the five major steel products performed well, with rebar and HRC inventories continuing to decline, lower than the same period in previous years. Coupled with the improvement in market sentiment, iron ore prices continued to climb and fluctuate upward. In the short term, ore prices are supported and will continue to fluctuate upward.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
