MARKET COMMENTARY

Today, the DCE Iron Ore futures fluctuated rangebound during the day, with the most-traded contract I2509 closing at 696, down 0.57% for the day. Some merchants showed moderate enthusiasm for shipping goods. As the weekend approached, the purchase willingness of steel mills weakened somewhat, with some steel mills conducting tenders based on demand. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 753-757 yuan/mt, up 2 yuan/mt from yesterday's low. In the Tangshan region, the transaction prices of PB fines were around 760-765 yuan/mt, stable compared to yesterday's prices.

As of May 9, SMM data showed that the total inventory at 35 ports was 139.66 million mt, a decrease of 280,000 mt from before the holiday and a decrease of 350,000 mt WoW. The daily average port pick-up volume of imported ore was 3.019 million mt, a decrease of 129,000 mt from before the holiday. The pace of post-holiday purchases slowed down, leading to a downward trend in port pick-up volume. The decline in port inventory significantly narrowed. Looking ahead to next week, iron ore demand is expected to weaken, which will continue to suppress

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
