MARKET COMMENTARY

Today, the Dalian iron ore futures continued to hold up well, with the most-traded contract I2509 closing at 728.5, up 0.76% for the day. Traders sold their goods in line with market conditions, while steel mills adopted a wait-and-see attitude, with their purchase willingness weakening somewhat. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction price of PB fines was around 765 yuan/mt, basically flat compared to yesterday's price. In the Tangshan region, the transaction price of PB fines was around 775 yuan/mt, also basically flat compared to yesterday's price.

Today, the market learned that Guinea had designated several mining rights as strategic reserve areas, including iron ore projects. Coupled with the prolonged maintenance period due to the collapse of port equipment in Peru earlier, the market was concerned about a reduction in iron ore supply, supporting a slight rise in ore prices. However, SMM's daily average pig iron production fell by around 10,000 mt today, and there

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

For more details on MMi's iron ore methodology please download the guide published on our website at: www.mmiprices.com

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
