MARKET COMMENTARY

Today, DCE iron ore futures held up well, with the most-traded contract I2509 closing at 704.5, up 0.21% for the day. Traders showed moderate enthusiasm for selling, while steel mills adopted a cautious wait-and-see attitude, with some conducting tenders. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 720-722 yuan/mt, holding steady compared to last Friday. In the Tangshan region, the transaction prices of PB fines were around 735-738 yuan/mt, also holding steady compared to last Friday.

SMM's weekly shipping data showed that global iron ore shipments declined by 4% MoM last week, with decreases in total shipments from Australia and Brazil as well as non-mainstream suppliers, while India's shipments increased slightly. Port arrivals also fell by 4.76% MoM. Shipments in June have been hovering at a moderate level, and the overall increase in supply may fall short of expectations. In the short term,

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
