## MARKET COMMENTARY

Today, DCE iron ore futures jumped initially and then pulled back, with the most-traded contract I2509 closing at 785, up 0.38% for the day. Traders were highly motivated to sell. Steel mills purchased as needed, and with the weekend approaching, inquiry volumes slightly declined. The market transaction atmosphere was moderate. In the Shandong region, the mainstream transaction prices of PB fines were around 765 yuan/mt, unchanged from yesterday's prices; in the Tangshan region, the transaction prices of PB fines were around 775-780 yuan/mt, also unchanged from yesterday's prices.

Today, iron ore futures prices jumped initially and then pulled back, mainly due to the reduction of long positions influenced by news. In the short term, the fundamentals of iron ore still provide strong support. Coupled with the approaching Political Bureau meeting, the market remains moderately optimistic about the introduction of favorable policies at the meeting. It is expected that ore prices will continue to hold up well next week, but the upside potential may be relatively limited.

### Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

**Data Exclusions***

| | 62% | 58% | 65% |
|---|---|---|---|
| Port Index | 0 | 0 | 0 |
| Seaborne index | 0 | | 0 |
| Lump Index 62.5 | 0 | | |

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

## IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
