MARKET COMMENTARY

Today, Dalian iron ore futures pulled back from highs, with the most-traded contract I2509 closing at 812, down 0.61% for the day. Traders' willingness to sell was average. Steel mills purchased as needed. The market transaction sentiment weakened. In the Shandong region, the mainstream transaction prices of PB fines were around 788 yuan/mt, down 10 yuan/mt from yesterday's prices. In the Tangshan region, the transaction prices of PB fines were around 800-805 yuan/mt, down 5-10 yuan/mt from yesterday's prices.

According to the SMM survey, on July 23, the operating rate of blast furnaces at 242 steel mills surveyed by SMM was 86.90%, down 0.11 percentage point MoM. The daily average hot metal production of the sampled steel mills was 2.4211 million mt, down 2,100 mt MoM. In the short term, hot metal production is expected to fluctuate rangebound, providing some support for ore prices. However, macro sentiment has cooled somewhat, leading to a decline in ore prices today. Attention should be paid to the impact of tomorrow's industrial data and the content

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
