MARKET COMMENTARY

Today, Dalian iron ore futures fluctuated rangebound, with the most-traded contract I2509 closing at 793, down 0.25% for the day. Traders sold goods according to market conditions, while steel mills purchased as needed. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 775-776 yuan/mt, basically flat compared to yesterday's prices. In the Tangshan region, the transaction price of PB fines was around 790 yuan/mt, also basically flat compared to yesterday's prices. Today's industrial data showed that affected by typhoons and high-temperature weather, the apparent demand for the five major steel products continued to decline this week, and the inventory accumulation rate accelerated, but remained at a low level YoY, having a limited impact on market sentiment. Currently, there were no significant changes in the fundamental or macro fronts. The market was waiting for the implementation of environmental protection-driven production restriction policies in the north. It is expected that the short-term trend will continue to fluctuate rangebound, with limited price fluctuations.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
