MARKET COMMENTARY

Today, Dalian iron ore futures continued to be in the doldrums, with the most-traded contract I2509 closing at 790, down 0.19% for the day. Traders sold goods according to market conditions. As the weekend approached, purchase willingness of steel mills declined somewhat. The market transaction atmosphere was average. In the Shandong region, the mainstream transaction prices of PB fines were around 770-772 yuan/mt, down 2-5 yuan/mt from yesterday's prices. In the Tangshan region, the transaction price of PB fines was around 785 yuan/mt, down 5 yuan/mt from yesterday's prices. As of August 8, the total iron ore inventory at 35 ports nationwide tracked by SMM was 129.27 million mt, a decrease of 1.21 million mt WoW. The daily average port pick-up volume of imported ore fell to 2.963 million mt, a decrease of 44,000 mt WoW. This week, the overall purchase willingness of steel mills declined somewhat. Additionally, news emerged today that steel mills in Tangshan had received production restrictions, with sintering machines to be restricted by 40% from August 26 and blast furnace production restrictions to be determined based on actual conditions, which suppressed ore prices. It is expected that such news will become more

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
