MARKET COMMENTARY

Today, Dce experienced a strong, fluctuating upward trend, with the main contract I2601 closing at 790.5 yuan, a slight increase of 0.44% compared to the previous trading day. Traders demonstrated moderate enthusiasm in offloading goods, while steel mills adopted a cautious wait-and-see approach, showing limited willingness to procure. Overall, market trading activity remained subdued. In the Shandong region, the transaction price for PB fines ranged between 789 and 795 yuan, up by 0-2 yuan/ton from last Friday's closing price. In the Hebei region, the transaction price for PB fines ranged from 798 to 802 yuan/ton, an increase of 0-3 yuan/ton compared to last Friday's closing price.

Last week, global iron ore shipments tracked by SMM totaled 35.9 million tons, reflecting a slight increase of 2.6 million tons from the previous week, representing a growth rate of approximately 7.8%. Meanwhile, SMM reported that China's iron ore arrivals amounted to 25.53 million tons, a decline of 3 million tons from the prior week, marking a decrease of about 10.5%. This drop was observed across coarse fines, refined fines, and lump ore. In the short term, iron ore supply pressure remains manageable. Coupled with the continuous postponement of blast furnace maintenance and persistently high hot metal production, the fundamental support remains relatively strong. Key factors to monitor include seasonal demand weakness in the industry, changes in apparent steel consumption, and the timing of inventory inflection points.

Iron Ore Index Compilation Rationale and Data Exclusions

MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

Data Exclusions*

	62%	58%	65%
Port Index	0	0	0
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
