

Fearnleys Dry Bulk Weekly

Sep 9, 2026

Capesize/Newcastlemax

We made a model consisting of factors like the global ballast/laden vessel ratio, West of Singapore ballasters, and a couple of other AIS indicators. Below the charts are tables showing where the model sits currently. It is only at extremes that these models give very clear suggestions about the near-term outlook.

Since last week, the models have changed to extreme levels, which suggests the market will correct in the coming weeks. To this, we can add that the Cape/Kamsarmax ratio is very high (2.5), and freight rates as a share of iron ore prices are at similar levels to early October 2021.

Cape/Newc Composite Model

Cape/Newc Composite Model - 4 Weeks Change

Capesize composite vs forward BCI 5TC (182k), USD/day

Average change in the BCI 5TC 182 over the next 2, 3 and 4 weeks, by composite bucket. Latest reading 08-Sep-2026: -0.97 (highlighted).

Panamax/Kamsarmax

Shipment volume growth continues to be lower than DWT supply growth. Through week 36, growth was 3.3%, compared to DWT supply growth of 4.2%. Comparing the last 10 weeks to the same period last year, shipment volume growth was -1.7%.

The correlation between p6 and the South Atlantic indicator continues to be accurate. The market has corrected slightly since last week, and is suggested to continue softening.

The Pacific indicator and the coal futures curve have been less accurate in predicting the market in the last weeks. These indicators suggest the market will fall in the next few weeks.

Top left chart: Shipment volumes were up 3.3% year on year through week 36. In the last eight weeks, volumes were down 0.9% compared to the same period last year. Supply growth was 4.2% at the latest reading.

Top right chart: The 2-month lead of the coal futures curve suggests the market could be past the peak.

Bottom left chart: The Pacific tightness indicator suggests market softness going forward. The index is a bit stronger now than what the indicator suggested.

Bottom right chart: The SATL tightness indicator suggests P6 could peak this week, then soften going forward.

Weekly Shipment Volumes

P5 vs Newcastle Coal Futures Curve Spread (Lead 2 Months)

P5TC vs Pacific Vessel Tightness Indicator (Lead 3 Weeks)

P6 vs South Atlantic Vessel Tightness Indicator (Lead 1 Month)

Supramax/Ultramax

Over the last week, shipment volume growth fell further to 2.9% compared with the same period last year. In the last 10 weeks, volume growth was just 0.9%. DWT Supply growth remains at 5.2%.

Average voyage durations have increased by about 4% this year, which keeps the market strong, although preliminary estimates for August show ton-time growth was just 2%, down from 13% in April. June/July/August average ton-time growth was an estimated 5.4%, slightly higher than DWT supply growth.

Top left chart: Weekly shipment volumes, 2026 ytd vs 2025.

Top right chart: The chart indicates the tightness in the South Atlantic basin. A lower reading reflects tighter market conditions, but can also suggest a near-term market peak. Conversely, a higher reading suggests looser market conditions but can also suggest a near-term market bottom. The longer-term average is 247, and the latest reading is 240.

Bottom left chart: The price change of copper usually leads the change of the Supra/Ultra market. Towards the end of the year, the suggestion is for a sideways trending market. Some are attributing the rise in copper prices much more to supply than to demand, which, if that is the case, makes this indicator a bit less certain.

Bottom right chart: The chart indicates the tightness in the North Atlantic basin. A lower reading reflects tighter market conditions, but can also suggest a near-term market peak. Conversely, a higher reading suggests looser market conditions but can also suggest a near-term market bottom. The longer-term average is 287, and the latest reading is 281.

Copper Price Change vs Supramax 1 Year TC Change

S4B vs North Atlantic Tightness Indicator

Handysize

Through week 36, shipment volume growth grew by an estimated 1.3% compared to last year. DWT supply growth remains at 3.2%. The market remains firmer than the weak headline figures suggest. In the near-term, the strength of the Ultramax segment suggest continued sideways/slightly up in this segment to.

Top left chart: The ratio between Rio-Recalada / Skaw-Passero (HS3) and SEA / Singapore-Japan (HS5) is usually a good predictor of tops and bottoms of the HS3 route. A higher ratio suggests a market top, and a lower ratio suggests a market bottom.

Top right chart: Through week 36, Handysize shipment volumes were 1.3% higher year on year, declining from the 3%+ figures seen in the last months. DWT supply growth was 3.2% at the latest reading.

Bottom left chart: The correlation between the S11TC and HS7TC is over 90%. The correlation is even higher when the S11TC index is shifted forward a few days, which means that movements in the S11TC index often lead the movements of the HS7TC.

Bottom right chart: The change in the price of copper is usually an accurate leading indicator for asset values.

Disclaimer

1. Introduction

The statistical and graphic information set forth in the analysis is compiled by Fearnresearch and based on the databases and time series supplied by Fearnresearch, the research division of Fearnleys AS, and other external sources of information. Fearnresearch compiles, processes and publishes data for the benefit of the brokering departments of Fearnleys AS and its clients. Its methodologies for collecting data, and therefore the data collected, may differ from those of other sources, and its data do not reflect all or even necessarily a comprehensive set of actual transactions occurring in the market. Certain estimates may be based on prevailing market conditions. There can be no assurance that such data reflect actual market conditions.

Data compilation, especially for earlier historical periods, is subject to limited audit and validation procedures. Both closed and open sources, interviews and market intelligence to gain information on different topics may be used. Accordingly, there can be no assurance as to the accuracy or completeness of the estimates, advice, statements and any other information contained in the analysis.

2. Risks

Research coverage of Fearnleys AS encompasses solely companies within the shipping sector. This sector is cyclical by nature and will over time presumably experience higher volatility than the overall market.

3. Confidentiality

Pursuant to Fearnleys' Code of Conduct, all employees of Fearnleys AS are subject to duty of confidentiality towards clients and with respect to handling inside information. All employees shall follow strict information handling procedures and other organizational procedures to minimize conflicts of interest within Fearnleys and between clients.

4. General Disclaimer of Liability

The analyses, estimates, advice, statement and any other information contained in the analysis are prepared and presented in good faith. However, neither Fearnresearch, Fearnleys AS nor any of their subsidiaries, associated companies, organisations, management personnel, employees, agents or independent contractors (collectively the "Fearnley Interests") shall under any circumstances be under any liability for any losses, damages or costs caused to any person, company or other legal entity arising or resulting directly or indirectly from reliance on any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information contained in the analysis resulting directly or indirectly from any negligent or gross negligent act(s) or omission (s), or wilful misconduct, committed by any of the Fearnley Interests.

In the event that a court or tribunal, notwithstanding the above liability exemptions, should hold any, some or all of the Fearnley Interests liable in damages for any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information, the liability shall not under any circumstances whatsoever exceed in total ten (10) times the fees payable for the analysis in question, or US\$ 100,000 (United States Dollar Hundred Thousand), whichever is the higher.

Under no circumstances whatsoever shall the individual or individuals who have caused the losses, damage or costs be held personally responsible or liable in any way. The Fearnley Interests shall under no circumstances whatsoever be liable for punitive damages.

The analysis is prepared to the benefit of the named addressee only. No other third party may rely on the analysis or any of its content without prior written approval of Fearnley Consultants AS.

Should any part of this clause be held unenforceable, non-operative or invalid by a court or tribunal, the remaining parts shall remain in full force.

5. Processing of Personal Data

The processing of personal data within Fearnleys AS is subject to strict rules and regulations. Our Privacy Policy describes the procedures for processing personal data according to the General Data Protection Regulation (GDPR). Please see our homepage for more information on this.
