IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Aug 7th, 2026		CFR Qingdao, USD/dry tonne							Today, the DCE iron ore futures moved steadily today. The most-traded DCE I2609 contract closed at 716.5 yuan/mt, up 0.35% from the previous session. Spot prices at Qingdao Port averaged a decline of about 0-2 yuan/mt from the previous trading day. Trader activity was moderate, steel mills purchased as needed, and overall spot transactions were modest. This week, iron ore exhibited a supply-demand weakness trend. SMM's latest statistics show that iron ore inventory at 35 major ports nationwide totaled 146.39 million mt, down 420,000 mt WoW. Meanwhile, the daily average port pick-up volume edged down 45,000 mt to 3.095 million mt. The supply side, affected by earlier shipping pace and weather factors, saw port arrivals edge down. On the demand side, some blast furnaces underwent maintenance this week, and SMM's daily average pig iron production dropped to 2.4058 million mt, dragging iron ore demand lower. In terms of fundamentals, short-term iron ore prices may lean toward consolidation.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
