**MoM percentage point change in utilisation**

**▲ 1.2**

**YoY percentage point change in utilisation**

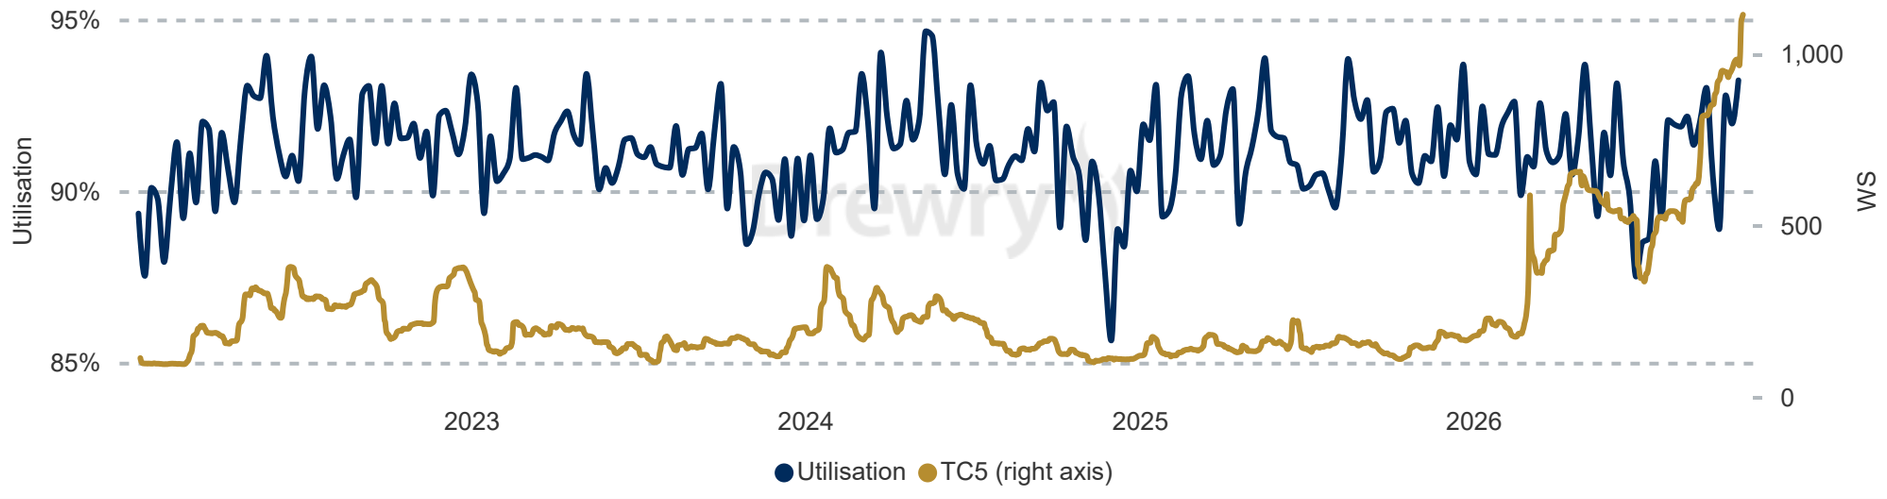

## Utilisation

## LR1 utilisation and tonne-mile demand strengthen amid tighter vessel availability

- LR1 utilisation increased to 93.2% in Week 43, up 2.8 percentage points MoM and 1.2 percentage points YoY, reflecting stronger fleet employment. Demand remained robust, with the tonne-mile index rising to 109.0, up 15.9% YoY, supported by sustained long-haul clean petroleum product movements and firmer trading activity across key routes.
- Vessel availability tightened despite a mixed regional picture. Anchored capacity increased by 11.5% MoM in the West and 1.9% MoM in the East, while laden anchor days rose 1.8% on a four-week moving-average basis. The share of laden vessels declined by 10.7 percentage points MoM in the East but increased by 3.9 percentage points in the West, suggesting stronger cargo concentration in Atlantic markets and a more balanced vessel supply-demand position overall.
- Market conditions remained supportive as stronger demand outweighed gains in fleet productivity. East ballast speeds increased 10.7% MoM while West ballast speeds fell 13.9% MoM, indicating tighter vessel availability in western markets despite higher bunker prices of $933/tonne.

## Utilisation vs Baltic rates

**▲ 11.5%**

## Ballast tonnage at anchor in Indian

## Ballast tonnage at anchor in Pacific

## Ballast tonnage at anchor in Atlantic

| S No. | Terms | Define |
|---|---|---|
| 1 | LR1 vessel | Long range coated tanker vessels which have dwt in the range of 60,000-80,000 |
| 2 | Trading status | Status of vessels has been derived primarily from the navigation field within the AIS message. Vessels which do not have IMO number have not been included in the fleet. Furthermore, vessels that have not returned AIS message for at least 30 days, have been excluded from the analysis of fleet status while vessels that have not returned an AIS message for up to 30 days are assumed to have the same trading status as when last seen. |
| 3 | Laden dwt miles | Average distance travelled per week across the laden target fleet multiplied by the average vessel deadweight (or capacity) |
| 4 | Bunker price | Price of the VLSFO at Singapore Port |
| 5 | % Laden | Share of laden vessels in total fleet excluding vessels under repair |
| 6 | East | East to Suez Canal, comprising China, Pacific, Indian Ocean and Oceania |
| 7 | West | West of Suez Canal, comprising Atlantic region |
| 8 | TC5 | Spot rates from Baltic Exchange on Middle East Gulf–Japan route |
| 9 | TC8 | Spot rates taken from Baltic Exchange on Middle East Gulf-UK Continent route |
| 10 | At anchor | Vessels with navigation status ‘At Anchor’ in the waiting zone near port area |
| 11 | Moored | Vessels moored in port for loading or discharging |
| 12 | Underway | Vessels currently at sea and are currently underway towards their destination |
