IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

May 19th, 2026		CFR Qingdao, USD/dry tonne							Today iron ore futures trended weaker the most-traded contract I2609 closed at 798.5 yuan/mt, down 0.87% from the previous trading session. Port spot prices changed 0-3 yuan from the previous day. Traders showed moderate enthusiasm in offering quotes; steel mills had strong wait-and-see sentiment with few inquiries; overall spot market transactions were sluggish. This week's SMM survey data showed that the hot metal impact from blast furnace maintenance was 1.3066 million mt, down 37,300 mt WoW; next week (May 23 to May 29), the hot metal impact from blast furnace maintenance will be 1.2448 million mt, down 61,800 mt WoW. Currently, demand outside China remained robust, and end-use demand remained solid. Steel exports rose steadily. As blast furnaces that previously underwent maintenance resume production successively, daily pig iron production is expected to rebound slightly and stay high overall, driving rigid demand for iron ore. Iron ore fundamentals provided strong price support with limited downside. After a short-term pullback, the overall trend is expected to continue to fluctuate at highs.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
