IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

May 20th, 2026		CFR Qingdao, USD/dry tonne							Iron ore futures saw intense trading today, with the most-traded contract I2609 closing at 800 yuan/mt, up 0.19% from the previous trading session. Port spot prices were basically flat compared to the previous day. Traders showed moderate quoting activity; steel mills restocked on an as-needed basis with few inquiries; overall spot market transactions were limited. On the demand side, the capacity utilization rate of blast furnaces at 242 steel mills surveyed by SMM reached 89.53%, down 0.04 percentage points WoW. Daily average hot metal production at sample steel mills was 2.4258 million mt, down 1,000 mt WoW. Overall hot metal production remained at a high level, with rigid demand for iron ore providing strong price support. After fluctuations driven by macro news in previous days, iron ore's downward momentum has eased as rigid demand from hot metal persists. In the short term, prices are expected to fluctuate within a range, remaining at a relatively high level until new developments enter the market.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
