IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 24th, 2026		CFR Qingdao, USD/dry tonne							Today, DCE iron ore futures strengthened in the morning session and dipped slightly in the afternoon today, with the most-traded I2609 contract closing at 744 yuan/mt, up 0.74% from the previous trading session. Port spot prices rose 4-9 yuan/mt from the prior day. Miner activity was moderate, with steel mills primarily purchasing for essential restocking; spot trading volume has been mediocre thus far. On the fundamentals front, according to an SMM survey, the daily average hot metal output of sampled steel mills this week was 2.4607 million mt, down 4,300 mt WoW. Pig iron production has reached an inflection point, and iron ore demand is expected to weaken going forward. On the news front, market rumors of tightening iron ore supply disrupted the near-term bearish sentiment. Taking all factors into account, iron ore prices are likely to move sideways in the short term, while the medium and long-term outlook remains bearish.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50	
Silica%	1.40	2.25	2.25	1.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
