IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 27th, 2026		CFR Qingdao, USD/dry tonne							Today, iron ore price fluctuations on the Dalian Commodity Exchange (DCE) were relatively narrow. The DCE benchmark contract 12609 closed at 741 yuan/ton, down 0.27%. Spot prices at Qingdao Port remained essentially flat compared with the previous trading day. Early morning saw active quotations from traders, while steel mills purchased on an as-needed basis, resulting in generally moderate spot trading activity. Recently, iron ore supply has shown an increase. According to SMM statistics, global iron ore shipments totalled 27.82 million tonnes, down 10% month-on-month but up 1% year-on-year on a cumulative basis. Shipments from Australia and Brazil both declined slightly. Shipments from non-mainstream countries also decreased month-on-month, though those from India and Peru rebounded noticeably. Meanwhile, iron ore arrivals at Chinese ports totalled 30.32 million tonnes, surging 54% month-on-month and up 5% year-on-year cumulatively, with part of the increase driven by the discharge of vessels delayed by previous typhoons. On the demand side, blast furnace pig iron production continued its off-season downward trend, moving steadily lower. On the sentiment front, the US and Iran engaged in ceasefire negotiations, causing oil prices to fall, but the iron ore market showed little reaction. Overall, short-term iron ore prices are likely to remain in a range-bound pattern.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions			
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.			
Alumina %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
