IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 30th, 2026		CFR Qingdao, USD/dry tonne							Today, the iron ore market on the Dalian Commodity Exchange showed a volatile trading pattern, with contract I2609 eventually closing at 747 yuan/ton, up +0.61% compared with the previous trading session. Port spot prices rose by 0-3 yuan/ton from the previous day. Trader activity was moderate, while steel mill purchases remained largely needbased; as of now, spot market transaction volumes have been average. The current iron ore fundamentals continue to show a bearish bias. Supply remains loose, with no clear sign of reversal, while demand has entered a plateau and is expected to continue its downward trend in the future. This week's SMM survey data indicate that blast furnace maintenance resulted in hot metal output impact of 1,156,300 tonnes, down by 48,700 tonnes week/ton/week, with the projected impact for next week reaching 1,200,500 tonnes. On the news front, most factors are marginal disturbances, with bullish news taking the lead but not yet pointing to a directional trend. Therefore, considering all factors, short/term iron ore prices are expected to maintain a range/bound consolidation pattern.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
