MARKET COMMENTARY

Jul 17th, 2026		CFR Qingdao, USD/dry tonne							The iron ore market traded sideways today, with the DCE main contract I2609 eventually closing at 762 RMB/ton, up 0.53% from the previous day's closing price. Spot prices mostly followed with gains of 0-2 RMB/ton. Traders sold goods in line with market conditions; as the weekend approached, steel mills showed weaker purchasing willingness, and market trading activity was generally moderate. As of July 17, the latest, SMM statistics show that iron ore inventory across 35 major ports nationwide totaled 145.13 million tonnes, down 2.03 million tonnes from the previous period, marking another round of destocking. During the same period, the average daily port offtake fell slightly by 55,000 tonnes to 3.22 million tonnes. This week, due to short-term weather disruptions, arrivals at some ports dropped notably, and resource replenishment tightened significantly. Looking ahead to next week, although iron ore demand is expected to weaken further, the US-Iran conflict and long-term contract negotiations will continue to create disturbances in the market. Prices are expected to maintain a range-bound fluctuation next week.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
