IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 28th, 2026		CFR Qingdao, USD/dry tonne							Today, iron ore prices experienced narrow fluctuations on the futures market. The DCE main contract I2609 closed at 741 yuan/ton, down 0.20% from the previous trading session. Spot prices at Qingdao Port remained unchanged from the previous day. Traders showed generally average enthusiasm for quoting, while steel mills purchased on a need-to-use basis, resulting in moderate overall spot transaction activity. At present, the fundamentals of iron ore itself show little change, with demand entering a plateau phase. According to SMM statistics, the blast furnace maintenance this week has reduced hot metal output by 1.5678 million tons, an increase of 140,200 tons compared to last week's maintenance impact. Next week, the maintenance impact is expected to decrease by 207,500 tons week-on-week. On the supply side, as domestic mines gradually resume production, iron concentrate supply is expected to return to normal levels, and the concentrate premium may edge down slightly. In addition, the news front remains in a vacuum period, and the main contract is in its rollover phase, with no clear directional guidance for the near-term outlook. Market participants are closely watching the progress of negotiations and maintaining a strong wait-and-see attitude. Therefore, in the short term, iron ore prices are likely to continue their narrow range-bound fluctuation.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions			
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.			
Alumina %	65.00	62.00	58.00	62.50				
Silica%	1.40	2.25	2.25	1.50				
Phosphorus %	1.50	4.00	5.50	3.50				
Sulphur %	0.06	0.09	0.05	0.08				
Moisture %	0.01	0.02	0.02	0.02				
	8.00	8.00	9.00	4.00				
Sizing	Granular size below 10mm for at least 90% of cargo; maximum of 40% below 150 micron			Size below 6.3mm max 15% Size above 31.15mm max 25%				
Pricing Point	Qingdao Port (FOT and CFR respectively)			FOT Qingdao Port				
Timing (Seaborne)	Loading within 4 weeks, Delivery within 8 weeks			Delivery within 2 weeks				
Payment Terms	L/C at sight			L/C at sight or CAD				

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
