IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 6th, 2026		CFR Qingdao, USD/dry tonne							Today, DCE iron ore futures trended strong but pulled back slightly in the afternoon. Contract I2609 closed at 738 yuan/mt, up 0.14% from the previous trading day. Port spot prices rose 2-3 yuan/mt from the previous day. Traders were active in quoting, steel mills purchased as needed, and inquiry interest was moderate, with spot transaction volumes remaining low so far. Looking ahead, as the downstream enters the off-season and the pace of mine shipments slows, the supply side of iron ore is expected to tighten slightly, though the overall loose pattern will be hard to change. Last week, SMM's global iron ore shipments totaled 35.16 million mt, up 1.53% WoW, with cumulative YoY growth of 1.77%. Among them, Australia's shipments edged down 6% WoW, while Brazil's surged nearly 20% WoW, and non-mainstream countries' shipments edged up slightly WoW. Among the four major miners, shipments from Rio Tinto and FMG declined. In addition, last week, SMM's China iron ore arrivals totaled 28.78 million mt, edging down 1.88% WoW, with cumulative YoY growth of 6.07%. Overall, iron ore prices are likely to fluctuate within a range in the short term, while the long-term outlook remains bearish.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50	
Silica%	1.40	2.25	2.25	1.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
