IRON ORE SEABORNE INDEX (IOS1)

MARKET COMMENTARY

Jun 26th, 2026		CFR Qingdao, USD/dry tonne							Today, the DCE iron ore futures trended strong today, pulling back slightly near the close. The most-traded I2609 contract closed at 748 yuan/mt, up 0.81% from the previous trading session. Port spot prices rose 8-11 yuan/mt from the prior day. Trader quoting activity was moderate, steel mills maintained a strong wait-and-see stance, and spot trading volumes were moderate as of now. Looking ahead, iron ore port data for this period, according to an SMM survey, showed a slight destocking. Total inventory reached 148.66 million mt, down 690,000 mt MoM, while port pick-up volume edged down 38,000 mt to 3.23 million mt. The destocking was mainly driven by a decline in port arrivals. Overall, the iron ore supply side remained loose. On the news front, market rumors were frequent, and the tug-of-war between longs and shorts was fierce, with no clear divergence yet. With fundamentals and sentiment intertwined, ore prices are likely to continue moving sideways in the short term.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
