MARKET COMMENTARY

Jul 9th, 2026		CFR Qingdao, USD/dry tonne							Today, the DCE iron ore futures trended weak today, with contract I2609 closing at 745.5 yuan/mt, up 0.27% from the previous trading day. Port spot prices ranged from -2 to +3 yuan/mt compared with the previous trading day. Trader activity was moderate, steel mills made few inquiries, and as of now, spot transaction volumes were low. According to the SMM survey, total inventory at the 10 main ports stood at 108.14 million mt, down 1.32 million mt MoM. Among them, fines destocking slowed, lump ore destocking was good, and pellet inventory was at an extremely low level. In the short term, pellet and lump premiums are expected to remain firm, while fines prices will find it difficult to break higher as inventory accumulates. Demand side, steel mills' purchase willingness showed a weakening trend MoM. In the short term, iron ore prices are expected to continue fluctuating with limited upside and resistance to downward pressure on prices.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
