

Fearnleys Dry Bulk Weekly

Aug 26, 2026

Capesize/Newcastlemax

We made a model consisting of factors like the global ballast/laden vessel ratio, West of Singapore ballasters, and a couple of other AIS indicators. Below the charts are tables showing where the model sits currently, as an attempt at an advanced "traffic light" type of outlook. It is only at extremes that these models give very clear suggestions about the near-term outlook. Currently, both are mildly positive.

Regarding fundamentals, shipment volume growth was 4% higher than last year through week 34, compared with DWT supply growth of 1.8%. In the last 6 weeks, Atlantic shipment volumes were up by an exceptional 20% compared to the same period last year, which was all down to the 80% year-on-year increase in Bauxite shipments.

Cape/Newc Short Term Model

Cape/Newc Short Term Model - 4 Weeks Change

Capesize composite vs forward BCI

Mean change in BCI 5TC 182 (\$/day) by level of the Capes composite z-score

All observations	588	+645	54%	+1,030	56%	+1,376	56%

Current 4-week change -0.04 — highlighted row. Correlation with the 4-week forward index: $r = +0.48$.
Daily observations Jan 2025 – 25 Aug 2026; overlapping windows. Indicative only, not a validated forecast.

Panamax/Kamsarmax

Shipment volume growth continues to be lower than DWT supply growth. Through week 34, growth was 3.3%, compared to DWT supply growth of 4.2%. Comparing the last 8 weeks to the same period last year, shipment volume growth declined by 1.8%. Comparing the last 10 weeks, volumes were flat. At this point, it seems the market is held up mostly due to strength in other segments, where demand/supply comparisons are more bullish.

Top left chart: Shipment volumes were up 3.3% year on year through week 34. In the last eight weeks, volumes were down 1.8% compared to the same period last year. Supply growth was 4.2% at the latest reading.

Top right chart: The 2-month lead of the coal futures curve suggests the market could be past the peak.

Bottom left chart: The Pacific tightness indicator suggests market softness going forward.

Bottom right chart: The SATL tightness indicator suggests P6 is close to a peak, then soften next month.

Weekly Shipment Volumes

P5 vs Newcastle Coal Futures Curve Spread (Lead 2 Months)

P5TC vs Pacific Vessel Tightness Indicator (Lead 3 Weeks)

P6 vs South Atlantic Vessel Tightness Indicator (Lead 1 Month)

Supramax/Ultramax

Through last week, shipment volume growth fell further, to 3.7% compared with the same period last year. In the last 8 weeks, volume growth was also 3.7%. DWT Supply growth remains at 5.2%. The near-term indicators suggest a sideways-trending market.

Top left chart: Weekly shipment volumes, 2026 ytd vs 2025.

Top right chart: The chart indicates the tightness in the South Atlantic basin. A lower reading reflects tighter market conditions, but can also suggest a near-term market peak. Conversely, a higher reading suggests looser market conditions but can also suggest a near-term market bottom. The longer-term average is 247, and the latest reading is 248.

Bottom left chart: The price change of copper usually leads the change of the Supra/Ultra market. Towards the end of the year, the suggestion is for a sideways trending market. Some are attributing the rise in copper prices much more to supply than to demand, which, if that is the case, makes this indicator a bit less certain.

Bottom right chart: The chart indicates the tightness in the North Atlantic basin. A lower reading reflects tighter market conditions, but can also suggest a near-term market peak. Conversely, a higher reading suggests looser market conditions but can also suggest a near-term market bottom. The longer-term average is 287, and the latest reading is 276.

Copper Price Change vs Supramax 1 Year TC Change

S4B vs North Atlantic Tightness Indicator

Handysize

Revisions to week 33 shipment volume growth showed that growth was lower than initially estimated, at 2.1%. DWT supply growth remains at 3.2%. The market will most likely move sideways in the near-term.

Top left chart: The ratio between Rio-Recalada / Skaw-Passero (HS3) and SEA / Singapore-Japan (HS5) is usually a good predictor of tops and bottoms of the HS3 route. A higher ratio suggests a market top, and a lower ratio suggests a market bottom.

Top right chart: Through week 33, Handysize shipment volumes were 2.1% higher year on year, declining from the 3%+ figures seen in the last months. DWT supply growth was 3.2% at the latest reading.

Bottom left chart: The correlation between the S11TC and HS7TC is over 90%. The correlation is even higher when the S11TC index is shifted forward a few days, which means that movements in the S11TC index often lead the movements of the HS7TC.

Bottom right chart: The change in the price of copper is usually an accurate leading indicator for asset values.

Disclaimer

1. Introduction

The statistical and graphic information set forth in the analysis is compiled by Fearnresearch and based on the databases and time series supplied by Fearnresearch, the research division of Fearnleys AS, and other external sources of information. Fearnresearch compiles, processes and publishes data for the benefit of the brokering departments of Fearnleys AS and its clients. Its methodologies for collecting data, and therefore the data collected, may differ from those of other sources, and its data do not reflect all or even necessarily a comprehensive set of actual transactions occurring in the market. Certain estimates may be based on prevailing market conditions. There can be no assurance that such data reflect actual market conditions.

Data compilation, especially for earlier historical periods, is subject to limited audit and validation procedures. Both closed and open sources, interviews and market intelligence to gain information on different topics may be used. Accordingly, there can be no assurance as to the accuracy or completeness of the estimates, advice, statements and any other information contained in the analysis.

2. Risks

Research coverage of Fearnleys AS encompasses solely companies within the shipping sector. This sector is cyclical by nature and will over time presumably experience higher volatility than the overall market.

3. Confidentiality

Pursuant to Fearnleys' Code of Conduct, all employees of Fearnleys AS are subject to duty of confidentiality towards clients and with respect to handling inside information. All employees shall follow strict information handling procedures and other organizational procedures to minimize conflicts of interest within Fearnleys and between clients.

4. General Disclaimer of Liability

The analyses, estimates, advice, statement and any other information contained in the analysis are prepared and presented in good faith. However, neither Fearnresearch, Fearnleys AS nor any of their subsidiaries, associated companies, organisations, management personnel, employees, agents or independent contractors (collectively the "Fearnley Interests") shall under any circumstances be under any liability for any losses, damages or costs caused to any person, company or other legal entity arising or resulting directly or indirectly from reliance on any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information contained in the analysis resulting directly or indirectly from any negligent or gross negligent act(s) or omission (s), or wilful misconduct, committed by any of the Fearnley Interests.

In the event that a court or tribunal, notwithstanding the above liability exemptions, should hold any, some or all of the Fearnley Interests liable in damages for any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information, the liability shall not under any circumstances whatsoever exceed in total ten (10) times the fees payable for the analysis in question, or US\$ 100,000 (United States Dollar Hundred Thousand), whichever is the higher.

Under no circumstances whatsoever shall the individual or individuals who have caused the losses, damage or costs be held personally responsible or liable in any way. The Fearnley Interests shall under no circumstances whatsoever be liable for punitive damages.

The analysis is prepared to the benefit of the named addressee only. No other third party may rely on the analysis or any of its content without prior written approval of Fearnley Consultants AS.

Should any part of this clause be held unenforceable, non-operative or invalid by a court or tribunal, the remaining parts shall remain in full force.

5. Processing of Personal Data

The processing of personal data within Fearnleys AS is subject to strict rules and regulations. Our Privacy Policy describes the procedures for processing personal data according to the General Data Protection Regulation (GDPR). Please see our homepage for more information on this.
