

Fearnleys Dry Bulk Weekly

Sep 24, 2026

Capesize/Newcastlemax

We made a model consisting of factors like the global ballast/laden vessel ratio, West of Singapore ballasters, and a couple of other AIS indicators. Below the charts are tables showing where the model sits currently. It is only at extremes that these models give very clear suggestions about the near-term outlook.

Since last week, the models dropped out of the upper extremes, so they are no longer suggesting a correction. The main reason for the improvement is the drop in West of Singapore ballasters. However, it's worth explaining that these models give a forward suggestion for the next 4 weeks, and the readings were still extreme until 19th Sep. Hence, the bearish signals are still "live" through October 19th.

Last week, Cape/Newc shipment volumes from the South Atlantic were unchanged from the same week last year - the first such week in several months. Over the last six weeks, total Atlantic volumes increased 14% year on year.

Cape/Newc Composite Model

Cape/Newc Composite Model - 4 Weeks Change

Capesize composite vs forward BCI 5TC (182k), USD/day

Average change in the BCI 5TC 182 over the next 2, 3 and 4 weeks, by composite bucket. Latest reading 23-Sep-2026: -0.29 (highlighted).

Model reading	Obs	+2w \$/d	up %	+3w \$/d	up %	+4w \$/d	up %

Panamax/Kamsarmax

Shipment volume growth continues to be lower than DWT supply growth. Through week 38, growth was 2.9%, compared to DWT supply growth of 4.2%. Comparing the last 10 weeks to the same period last year, shipment volume growth was -2.0%.

Near-term indicators has turned more constructive. P6 have adjusted down and is now suggested to trend sideways. Emerging tightness in the Pacific suggests P5TC will rise into mid October.

Top left chart: Shipment volumes were up 2.9% year on year through week 38. In the last ten weeks, volumes were down -2.0% compared to the same period last year. Supply growth was 4.2% at the latest reading.

Top right chart: The 2-month lead of the coal futures curve suggests the market could be past the peak.

Bottom left chart: The Pacific tightness indicator suggests the market will increase into mid October.

Bottom right chart: The SATL tightness indicator suggests P6 will stabilize around current levels.

Weekly Shipment Volumes

P5 vs Newcastle Coal Futures Curve Spread (Lead 2 Months)

P5TC vs Pacific Vessel Tightness Indicator (Lead 3 Weeks)

P6 vs South Atlantic Vessel Tightness Indicator (Lead 1 Month)

Supramax/Ultramax

Through week 38, shipment volume growth was 4.1%, as volumes increased notably in the last couple of weeks. The last 10 weeks, volumes increased by 3.0% compared to the same period last year. DWT Supply growth remains at 5.2%. The lower volumes are reflected in the ballast/laden vessel ratio shown below. This ratio has diverged from earnings over the last month and a half. If the market keeps rising even though volume/ton-time vs supply growth suggests it shouldn't, what causes it to rise? Fear of not getting hold of physical commodities certainly explains part of it. This phenomenon is much more common in the Tanker segment, where freight can get excessively bid for that reason.

Top left chart: Weekly shipment volumes, 2026 ytd vs 2025.

Top right chart: S11TC vs the Ballaster/Laden vessel ratio. A lower ratio indicates a looser market balance, and vice versa. The index and the ballast/laden ratio have diverged from the index over the last month and a half

Bottom left chart: The industrial metals index is composed of copper, aluminium, zinc and nickel, and weighted according to market value. The 9-month change of this index has a high correlation with the 9-month change of the Ultramax 1-year TC rate, and leads by about 3 months.

Bottom right chart: The 9-month change of the price of copper has a high correlation with the 9-month change of the Ultramax 1-year TC rate. The copper price change leads by about 4 months.

Ballaster/Laden Vessel Ratio vs S11TC

Industrial Metals Price Index vs Ultra/Supra 1 Year TC

Copper Price vs Ultramax 1 Year TC

Handysize

Through week 38, shipment volume growth grew by an estimated 0.8% compared to last year. DWT supply growth remains at 3.2%. The market remains firmer than the weak headline figures suggest. In the near-term, the strength of the Ultramax segment suggests continued sideways/slightly up in this segment.

HS4 is now at an extreme relative to the rest of the market. Corrections often follow after such a development. Though, of course, extremes can always get more extreme..

Top left chart: The ratio between Rio-Recalada / Skaw-Passero (HS3) and SEA / Singapore-Japan (HS5) is usually a good predictor of tops and bottoms of the HS3 route. A higher ratio suggests a market top, and a lower ratio suggests a market bottom.

Top right chart: Through week 38, Handysize shipment volumes were 0.8% higher year on year, declining from the 3%+ figures seen in the last months. DWT supply growth was 3.2% at the latest reading.

Bottom left chart: The correlation between the S11TC and HS7TC is over 90%. The correlation is even higher when the S11TC index is shifted forward a few days, which means that movements in the S11TC index often lead the movements of the HS7TC.

Bottom right chart: The change in the price of copper is usually an accurate leading indicator for asset values.

Disclaimer

1. Introduction

The statistical and graphic information set forth in the analysis is compiled by Fearnresearch and based on the databases and time series supplied by Fearnresearch, the research division of Fearnleys AS, and other external sources of information. Fearnresearch compiles, processes and publishes data for the benefit of the brokering departments of Fearnleys AS and its clients. Its methodologies for collecting data, and therefore the data collected, may differ from those of other sources, and its data do not reflect all or even necessarily a comprehensive set of actual transactions occurring in the market. Certain estimates may be based on prevailing market conditions. There can be no assurance that such data reflect actual market conditions.

Data compilation, especially for earlier historical periods, is subject to limited audit and validation procedures. Both closed and open sources, interviews and market intelligence to gain information on different topics may be used. Accordingly, there can be no assurance as to the accuracy or completeness of the estimates, advice, statements and any other information contained in the analysis.

2. Risks

Research coverage of Fearnleys AS encompasses solely companies within the shipping sector. This sector is cyclical by nature and will over time presumably experience higher volatility than the overall market.

3. Confidentiality

Pursuant to Fearnleys' Code of Conduct, all employees of Fearnleys AS are subject to duty of confidentiality towards clients and with respect to handling inside information. All employees shall follow strict information handling procedures and other organizational procedures to minimize conflicts of interest within Fearnleys and between clients.

4. General Disclaimer of Liability

The analyses, estimates, advice, statement and any other information contained in the analysis are prepared and presented in good faith. However, neither Fearnresearch, Fearnleys AS nor any of their subsidiaries, associated companies, organisations, management personnel, employees, agents or independent contractors (collectively the "Fearnley Interests") shall under any circumstances be under any liability for any losses, damages or costs caused to any person, company or other legal entity arising or resulting directly or indirectly from reliance on any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information contained in the analysis resulting directly or indirectly from any negligent or gross negligent act(s) or omission (s), or wilful misconduct, committed by any of the Fearnley Interests.

In the event that a court or tribunal, notwithstanding the above liability exemptions, should hold any, some or all of the Fearnley Interests liable in damages for any inaccurate, incorrect, incomplete or misleading analyses, estimate, advice, statement or any other information, the liability shall not under any circumstances whatsoever exceed in total ten (10) times the fees payable for the analysis in question, or US\$ 100,000 (United States Dollar Hundred Thousand), whichever is the higher.

Under no circumstances whatsoever shall the individual or individuals who have caused the losses, damage or costs be held personally responsible or liable in any way. The Fearnley Interests shall under no circumstances whatsoever be liable for punitive damages.

The analysis is prepared to the benefit of the named addressee only. No other third party may rely on the analysis or any of its content without prior written approval of Fearnley Consultants AS.

Should any part of this clause be held unenforceable, non-operative or invalid by a court or tribunal, the remaining parts shall remain in full force.

5. Processing of Personal Data

The processing of personal data within Fearnleys AS is subject to strict rules and regulations. Our Privacy Policy describes the procedures for processing personal data according to the General Data Protection Regulation (GDPR). Please see our homepage for more information on this.
