IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 22nd, 2026		CFR Qingdao, USD/dry tonne							The DCE iron ore futures continued to hit bottom today, with the most-traded I2609 contract closing at 739.5 yuan/mt, down 0.87%. Port spot prices fell by 3-5 yuan/mt from pre-holiday levels. Traders showed low selling enthusiasm, with many holding off from offering. Wait-and-see sentiment intensified among steel mills, and only a few purchases as needed. The overall trading atmosphere was sluggish. As of now, very few deals were concluded. Last week, SMM total global iron ore shipments reached 32.98 million mt, down 7.62% WoW, while cumulative shipments were up 1.9% YoY. Shipments from both Australia and Brazil declined, while those from non-mainstream countries edged up. In addition, SMM total China iron ore arrivals stood at 27.81 million mt last week, down 7.14% WoW, with cumulative growth of 5.85% YoY. This week, supply pressure eased slightly. However, as steel mill losses deepened and blast furnace maintenance increased, hot metal output is expected to decline this week. Iron ore demand weakened, leaving ore prices under downward pressure.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions			
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.			
Alumina %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
