IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

May 25th, 2026		CFR Qingdao, USD/dry tonne							On May 25, 2026, iron ore futures opened higher but retreated in the afternoon. The main contract I2609 finally closed at 793 yuan/ton, up 0.06% from the previous trading session. Port spot prices remained unchanged from the previous day. Trader quoting activity was moderate; steel mills purchased on a need-to basis with limited inquiries; overall spot market transactions were low so far today. Looking ahead, iron ore supply has increased in terms of shipments but narrowed slightly on the supply side. According to SMM statistics, last week's global shipments totalled 33.9581 million tonnes, up 9.82% month-on-month, but arrivals at Chinese ports totalled 24.31 million tonnes, down 6% month-on-month. The increase in shipments has yet to translate into arrivals, leaving near-port available resources tight on the demand side. Some blast furnaces under maintenance are scheduled to resume production this week, and both hot metal output and iron ore purchases are expected to rise in tandem. Given this near-term supply-demand mismatch, ore prices are likely to find support and trade higher in the short term.

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50	
Silica%	1.40	2.25	2.25	1.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
