MARKET SUMMARY

INDIA

- The Alang ship recycling market showed some improvement in sentiment during the week, with buyers actively seeking tonnage after losing several recent opportunities to Chittagong and Gadani.
- Although local market fundamentals remain relatively weak and overall activity is still below the levels seen in Bangladesh and Pakistan, some buying interest continues to be observed.
- Recent sales involving dark fleet vessels have provided limited support to market activity, while buyers remain selective on available tonnage.
- The Indian government's plans to develop port, ship repair, and shipbuilding infrastructure in and around Gujarat may provide support to the regional maritime economy over the longer term.

BANGLADESH

- The Bangladeshi ship recycling market remained firm during the week, with buying interest continuing to strengthen.
- Chittagong recyclers maintained a strong appetite for tonnage despite a recent decline in local melting scrap and steel plate prices.
- With the monsoon season nearing its end and an increasing number of HKC-compliant recycling yards becoming operational, demand for recycling tonnage is expected to rise further.
- These positive market fundamentals are expected to support steady and gradually improving price levels in the coming weeks.

PAKISTAN

- Market conditions remained healthy during the week, supported by firm demand from local recyclers.
- The continued absence of steel imports from Iran has helped sustain domestic demand and positive buyer sentiment.
- Recyclers remain interested in available tonnage, with conditions expected to remain steady in the near term.

TURKIYE

- Conditions remained largely unchanged during the week, with no notable movement in vessel supply or buyer demand.
- Activity continued at a steady pace, while overall sentiment remained stable.
- Türkiye continues to attract owners seeking compliance with EU Ship Recycling Regulations, though this remains a relatively limited segment.
- The significant price gap with recyclers in the Indian subcontinent continues to restrict competitiveness, with most conventional recycling candidates expected to move toward the higher-paying subcontinent markets.
