IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Aug 3rd, 2026		CFR Qingdao, USD/dry tonne							Today's iron ore market performance on the Dalian Commodity Exchange (DCE) remained weak. The DCE benchmark contract (2609) closed at 698 yuan/ton, down 2.85% from the previous trading session. Qingdao port spot prices fell by 9-12 yuan/ton from the previous day. Traders showed low willingness to quote, while steel mills purchased only for rigid needs, resulting in sluggish overall spot transactions. At present, there is no change in the fundamentals of the iron ore market, and supply is expected to remain relatively loose within the viable timeframe. Last week, MMi reported global iron ore shipments of 32.36 million tonnes, up 10% month-on-month. Meanwhile, iron ore arrivals at Chinese ports totaled 30.29 million tonnes, down slightly from the previous week but up 6% year-on-year on a cumulative basis. On the news front, some traders have recently become entangled in disputes over invoices and trade documents. Market participants expect that banks and trading houses will tighten credit lines and raise margin requirements to reduce risk exposure. As a result, some participants have been forced to sell physical cargo or hedge on the exchange, amplifying the downside movement in the short term. Therefore, iron ore prices are likely to show a weak trend in the near term.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
