IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Sep 11th, 2026		CFR Qingdao, USD/dry tonne							Iron ore futures were weaker today. The DCE most-traded 12701 contract settled at 718 yuan/mt, down 1.78% from the previous session. Qingdao port spot prices fell 8-13 yuan/mt on average. Traders were reasonably active and mills bought largely to cover immediate needs. Spot trading was thin. With the latest round of coke price increases now in effect, mill profitability has narrowed further. The market is concerned mills may begin cutting output, which would weigh on iron ore demand. On fundamentals, supply remains comfortable. SMM data showed stocks across 35 major Chinese ports at 143.49 million mt, down 420,000 mt week on week, a smaller draw than in recent weeks. Average daily port outbound volume rose 50,000 mt to 3.235 million mt. On demand, most mills are running at a loss but only a handful have production cut plans, so the actual impact on demand is limited. On the macro side, tensions in the Middle East continue to build. Houli forces in Yemen have tightened control around the Bab el Mandeb Strait, lifting oil prices and trade risk. Expectations of further Federal Reserve rate rises have also strengthened. Together these have reinforced a bearish market outlook and commodities are broadly under pressure. Iron ore prices are likely to stay weak in the near term, driven by news flow and sentiment.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMI by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
