IRON ORE SEABORNE INDEX (IOS1)

MARKET COMMENTARY

Jun 12th, 2026		CFR Qingdao, USD/dry tonne							DCE iron ore futures trading was in the doldrums today. The most-traded contract, I2609, eventually closed at 764 yuan/mt, down 0.33% from the previous trading session. Port spot prices were unchanged from the previous day. Traders showed average enthusiasm in quoting; steel mills purchased as needed with few inquiries, and spot trading volume was low as of now. SMM survey data show that as of today, total iron ore inventory at major Chinese ports reached 149.35 million mt, a WoW increase of 960,000 mt. Inventory edged up slightly, while daily average port pick-up volume edged up by 68,000 mt to 3.268 million mt. Overall supply was relatively loose, exerting strong downward pressure on ore prices. Additionally, the seventh round of coke price increase was officially announced today. Steel mill profits are expected to shrink, and bearish sentiment on iron ore prices fermented in the market. Overall, ore prices currently face significant upward resistance and are expected to continue hovering at lows in the short term.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50	
Silica%	1.40	2.25	2.25	1.50	
Phosphorus %	1.50	4.00	5.50	3.50

Timing (Seaborne)	Loading within 4 weeks, Delivery within 8 weeks			Delivery within 2 weeks	
Payment Terms	L/C at sight			L/C at sight or CAD	

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
