IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jun 15th, 2026		CFR Qingdao, USD/dry tonne							The iron ore DCE contract fluctuated with a slight upward bias today, with the I2609 contract finally closing at 771.5 yuan/ton, up 0.72% from the previous trading session. Port spot prices rose by 3-5 yuan/ton from the previous day. Traders were active in quoting, but steel mills became more cautious and showed weaker purchasing willingness. The market transaction atmosphere was subdued, with relatively low spot trading volumes so far. The signing of a memorandum of understanding between the US and Iran, expected to be formally finalized on the 19th, is likely to bring an end to the conflict. This is positive for the global economy, and iron ore prices strengthened accordingly. However, from a fundamental perspective, last week's SMM shipping data showed that shipment volumes from Australia and Brazil increased due to an end-of-quarter rush, while shipments from non-mainstream countries such as South Africa and India also rose. The resulting supply-side increase in iron ore continues to cap upside space. Additionally, with the implementation of the seventh round of coke price cuts today, losses have deepened for steel mills in some regions. Combined with weak off-season demand, some steel companies may schedule blast furnace maintenance in advance, leading to expectations of lower iron ore demand. Overall, iron ore faces significant upward resistance and may maintain a narrow range-bound fluctuation in the short term.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
