IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

| Jun 4th, 2026 |              | CFR Qingdao, USD/dry tonne |        |          |        |        |                  |                   | <div>The DCE iron ore futures trended weaker today. The most-traded contract I2609 closed at 767 yuan/mt, down 1.85% from the previous trading session. Port spot prices fell 6-11 yuan/mt from the previous day. Traders showed limited enthusiasm in offering; steel mills made few inquiries; overall spot market transactions were mediocre as of now.</div> <div>Fundamentals, the short-term rise in hot metal should have supported demand; however, in terms of industry chain profit distribution, the strength in coking coal forced a coke price hike, and steel mills generally showed limited acceptance of ore prices amid weak steel prices and rising raw material costs, putting ore prices under pressure. Macro perspective, the pullback in crude oil prices weakened short-term cost support for ore prices. Therefore, considering all factors, iron ore prices are likely to exhibit a weaker trend in the short term.</div> |

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
