IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Aug 5th, 2026		CFR Qingdao, USD/dry tonne							Today, the DCE Iron ore futures trended higher today. DCE's most-traded I2609 contract closed at 706 yuan/mt, up 0.93% from the previous trading session. Spot prices at Qingdao Port rose 3-8 yuan/mt from the prior trading day. Traders quoted actively, while steel mills purchased as needed, leaving overall spot trading moderate. The latest SMM survey data showed blast furnace operating rates at steel mills at 89.04%, up 0.11 percentage points MoM. Blast furnace capacity utilization rate was 88.80%, down 0.1 percentage points MoM. Daily average hot metal production at sampled mills stood at 2.4058 million mt, down 2,900 mt MoM. Due to increased maintenance at steel mills, pig iron production next week is expected to edge down, but given the short maintenance cycles, short-term iron ore demand remains fairly stable. On the news front, as the false invoice incidents continue to unfold, credit institutions are expected to tighten risk exposure, potentially hampering liquidity in short-term iron ore trade. On balance, short-term iron ore prices are likely to move sideways.

2. The cost refers to average cost in the industry based on SMM's survey of small, medium and large mills in China

IRON ORE INDEX SPECIFICATIONS, COMPILATION RATIONALE AND DATA EXCLUSIONS

Iron Ore Index Specifications (Port and Seaborne)					Iron Ore Index Compilation Rationale and Data Exclusions
Fe %	65% Fe Fines	62% Fe Fines	58% Fe Fines	62.5% Fe Lump	MMi iron ore indices are compiled from data provided by companies that are part of the iron ore supply chain and involved in spot market transactions. The indices are calculated using detailed transaction-level data submitted to MMi by these companies. This data is normalised to the appropriate specifications and screened to remove outliers before volume-weighted average prices are calculated from the remaining core set of data.
Alumina %	65.00	62.00	58.00	62.50	
Silica%	1.40	2.25	2.25	1.50	
Phosphorus %	1.50	4.00	5.50	3.50

Port Index	62%	58%	65%
Seaborne index	0		0
Lump Index 62.5	0		

* Number of price submissions for iron ore indices that were excluded from index calculations today as they were anomalous and could not be verified

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
