IRON ORE SEABORNE INDEX (IOSI)

MARKET COMMENTARY

Jul 23rd, 2026		CFR Qingdao, USD/dry tonne							Today, the DCE iron ore futures moved strongly today. The most-traded DCE I2609 contract closed at 747.5 yuan/mt, up 0.74%. Spot prices at Qingdao Port rose roughly 5-8 yuan/mt from the previous trading day. Trader activity was moderate, and inquiries from steel mills were limited. Spot trading was poor. Recently, steel mills' demand for iron ore has slowed. According to SMM data, inventories at the ten major ports totaled 105.63 million mt, down only 640,000 mt WoW. Based on current inventory structure, concentrate and lump ore destocking was relatively large, pellet inventories were at low levels, while fines saw a slight buildup. Demand side, off-season conditions persisted. Although environmental protection-driven production restrictions were relatively modest, the likelihood of steel mills voluntarily conducting blast furnace maintenance still exists. Next week's Politburo meeting expectations are heating up, potentially boosting market sentiment in the short term. On the whole, however, iron ore prices are expected to continue to move sideways in the near term.

IRON ORE DOMESTIC CONCENTRATE INDEX CALCULATION METHODOLOGY

The compilation method for price index generally refers to the compilation method of CPI price index and other price indices, breakdown the price data and calculate the average value according to a certain method, taking the vertical axis as the regional composite index (average of different grade index) and the horizontal axis as the grade composite index (average of different regional index), a total composite index for domestic ore can be output ultimately. The process system is also adopted in the calculation i.e. each sub-index can be obtained as well.
